Monday
Wednesday
Fridays
2100 Shanghai Time

Choosing the Winning Combination

The winning combination will be drawn randomly using this <https://www.random.org/quick-pick/> this site and implement it via a method of predicting random numbers in ethereum smart contracts. For more information, you can check this site: <https://blog.positive.com/predicting-random-numbers-in-ethereum-smart-contracts-e5358c6b8620>.

After all the numbers in the lottery have been drawn and should we have a winner, winnings will be automatically transferred to the owners of the winning ticket through the algorithm built in the smart contracts. Winnings will be paid in full within 120 seconds of the draw. Transfers are made to the cryptocurrency wallets that were used to buy the winning tickets

The Mitoshi platform will also address current issues being faced by today's lottery industry. Growth, regulation, accessibility, and fairness will all be revolutionized in the Mitoshi platform.

The code for the PRNG and smart contracts will soon be available for everyone to audit and check. To certify its independence, veracity

and transparency – we will invite third party certification agencies to testify on its foolproof capability such as auditing firms.

Non Jackpot Winners

Luck is still in the side of those who nearly guessed it, but not quite all.

- 5** **Numbers right**
(in any order)  TBA Based on that Draw's Total Sales
- 4** **Numbers right**
(in any order)  TBA Based on that Draw's Total Sales
- 3** **Numbers right**
(in any order)  10 MTSH tokens
- 2** **Numbers right**
(in any order)  1 MTSH token
